**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.1 Which statements are true?**

(a) In Java, the extends clause is used to specify the inheritance relationship.
(b) The subclass of a nonabstract class can be declared abstract.
(c) All members of the superclass are inherited by the subclass.
(d) A final class can be abstract.
(e) A class in which all the members are declared private, cannot be declared public.

**Q.2 Which statements are true? Select the two correct answers.**

(a) A class can only be extended by one class.
(b) Every Java object has a public method named equals.
(c) Every Java object has a public method named length.
(d) A class can extend any number of classes.
(e) A nonfinal class can be extended by any number of classes.

**Q. 3 Which statements are true? Select the two correct answers.**

(a) A subclass must define all the methods from the superclass.
(b) It is possible for a subclass to define a method with the same name and parameters as a method defined by the superclass.
(c) It is possible for a subclass to define a field with the same name as a field defined by the superclass.
(d) It is possible for two classes to be the superclass of each other.

**Q. 4 Given the following classes and declarations, which statements are true?**

```
// Classes
class Foo
{
        private int i;
        public void f() { /* ... */ }
        public void g() { /* ... */ }
}
class Bar extends Foo
{
        public int j;
        public void g() { /* ... */ }
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**// Declarations:**
**Foo a = new Foo();**
**Bar b = new Bar();**

**Select the three correct answers.**
(a) The Bar class is a subclass of Foo.
(b) The statement b.f(); is legal.
(c) The statement a.j = 5; is legal.
(d) The statement a.g(); is legal.
(e) The statement b.i = 3; is legal.

**Q.5 Which statement is true? Select the one correct answer.**
(a) Private methods cannot be overridden in subclasses.
(b) A subclass can override any method in a superclass.
(c) An overriding method can declare that it throws checked exceptions that are not thrown by the method it is overriding.
(d) The parameter list of an overriding method can be a subset of the parameter list of the method that it is overriding.
(e) The overriding method must have the same return type as the overridden method.

**Q.6 Given classes A, B, and C, where B extends A, and C extends B, and where all classes implement the instance method void doIt(). How can the doIt() method in A be called from an instance method in C? Select the one correct answer.**
(a) doIt();
(b) super.doIt();
(c) super.super.doIt();
(d) this.super.doIt();
(e) A.this.doIt();
(f) ((A) this).doIt();
(g) It is not possible.

**Q. 7 What would be the result of compiling and running the following program?**

```
// Filename: MyClass.java
public class MyClass
{
        public static void main(String[] args)
        {
                C c = new C();
                System.out.println(c.max(13, 29));
        }
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
class A
{
        int max(int x, int y)
        {
                if (x>y)
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
                return x;
        else
                return y;
    }
}

class B extends A
{
    int max(int x, int y)
    {
        return super.max(y, x) - 10;
    }
}
class C extends B
{
    int max(int x, int y)
    {
        return super.max(x+10, y+10);
    }
}
```

**Select the one correct answer.**

(a) The code will fail to compile because the max() method in B passes the arguments in the call super.max(y, x) in the wrong order.
(b) The code will fail to compile because a call to a max() method is ambiguous.
(c) The code will compile and print 13, when run.
(d) The code will compile and print 23, when run. (e) The code will compile and print 29, when run.
(f) The code will compile and print 39, when run.

**Q. 8 Which is the simplest expression that can be inserted at (1), so that the program prints the value of the text field from the Message class?**

```
// Filename: MyClass.java

class Message
{
     // The message that should be printed:
    String text = "Hello, world!";
}
class MySuperclass
{
    Message msg = new Message();
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
public class MyClass extends MySuperclass
{
        public static void main(String[] args)
        {
                MyClass object = new MyClass();
```

```
            object.print();
        }
        public void print()
        {
            System.out.println( /* (1) INSERT THE SIMPLEST EXPRESSION HERE */ );
        }
}
```

**Select the one correct answer.**

(a) text
(b) Message.text
(c) msg.text
(d) object.msg.text
(e) super.msg.text
(f) object.super.msg.text

**Q. 9 Which method declarations, when inserted at (7), will not result in a compile-time error?**

```
class MySuperclass
{
        public Integer step1(int i)
        {
            return 1;
        }    // (1)
        protected String  step2(String str1, String str2)
        {
            return str1;
        } // (2)
        public String step2(String str1)
        {
            return str1;
        } // (3)
        public static String step2()
        {
            return "Hi";
        } // (4)
        public MyClass makeIt()
        {
            return new MyClass();
        }  // (5)
        public MySuperclass makeIt2()
        {
```

```
            return new MyClass();
        }  // (6)
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
public class MyClass extends MySuperclass
{
        // (7) INSERT METHOD DECLARATION HERE
}
```

**Select the two correct answers.**

(a) public int step1(int i) { return 1; }
(b) public String step2(String str2, String str1) { return str1; }
(c) private void step2() { }
(d) private static void step2() { }
(e) private static String step2(String str) { return str; }
(f) public MySuperclass makeIt() { return new MySuperclass(); }
(g) public MyClass makeIt2() { return new MyClass(); }

**Q.10 What would be the result of compiling and running the following program?**

```
class Vehicle
{
        static public String getModelName()
        {
                return "Volvo";
        }
        public long getRegNo()
        {
                return 12345;
        }
}
class Car extends Vehicle
{
        static public String getModelName()
        {
                return "Toyota";
        }
        public long getRegNo()
        {
                return 54321;
        }
}
public class TakeARide
{
        public static void main(String args[])
        {
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
Car c = new Car();
Vehicle v = c;
System.out.println("|" + v.getModelName() + "|" + c.getModelName() +   "|"
+ v.getRegNo()  + "|" + c.getRegNo() + "|");
```

```
        }
}
```

**Select the one correct answer.**

(a) The code will fail to compile.
(b) The code will compile and print |Toyota|Volvo|12345|54321|, when run.
(c) The code will compile and print |Volvo|Toyota|12345|54321|, when run.
(d) The code will compile and print |Toyota|Toyota|12345|12345|, when run.
(e) The code will compile and print |Volvo|Volvo|12345|54321|, when run.
(f) The code will compile and print |Toyota|Toyota|12345|12345|, when run.
(g) The code will compile and print |Volvo|Toyota|54321|54321|, when run.

**Q. 11 What would be the result of compiling and running the following program?**

```
final class Item
{
        Integer size;
        Item(Integer size)
        {
                this.size = size;
        }
        public boolean equals(Item item2)
        {
                if (this == item2)
                        return true;
                return this.size.equals(item2.size);
        }
}
public class SkepticRide
{
        public static void main(String[] args)
        {
                Item itemA = new Item(10);
                Item itemB = new Item(10);
                Object itemC = itemA;
                System.out.println("|" + itemA.equals(itemB) +"|" + itemC.equals(itemB) +
                "|");
        }
}
```

**Select the one correct answer.**

(a) The code will fail to compile.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

(b) The code will compile and print |false|false|, when run.
(c) The code will compile and print |false|true|, when run.
(d) The code will compile and print |true|false|, when run.
(e) The code will compile and print |true|true|, when run.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.12 Which constructors can be inserted at (1) in MySub without causing a compile-time error?**

```
class MySuper
{
        int number;
        MySuper(int i) { number = i; }
}
class MySub extends MySuper
{
        int count;
        MySub(int count, int num)
        {
                super(num);
                this.count = count;
        }
        // (1) INSERT CONSTRUCTOR HERE
}
```

**Select the one correct answer.**

(a) MySub() {}
(b) MySub(int count) { this.count = count; }
(c) MySub(int count) { super(); this.count = count; }
(d) MySub(int count) { this.count = count; super(count); }
(e) MySub(int count) { this(count, count); }
(f) MySub(int count) { super(count); this(count, 0); }

**Q.13 Which statement is true? Select the one correct answer.**

(a) A super() or this() call must always be provided explicitly as the first statement in the body of a constructor.
(b) If both a subclass and its superclass do not have any declared constructors, the implicit default constructor of the subclass will call super() when run.
(c) If neither super() nor this() is declared as the first statement in the body of a constructor, this() will implicitly be inserted as the first statement.
(d) If super() is the first statement in the body of a constructor, this() can be declared as the second statement.
(e) Calling super() as the first statement in the body of a constructor of a subclass will always work, since all superclasses have a default constructor.

**Q.14 What will the following program print when run?**

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
// Filename: MyClass.java
public class MyClass
{
        public static void main(String[] args)
        {
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
                B b = new B("Test");
        }
}
class A
{
        A()
        {
                this("1", "2");
        }

        A(String s, String t)
        {
                this(s + t);
        }
        A(String s)
        {
                System.out.println(s);
        }
}
class B extends A
{
        B(String s)
        {
                System.out.println(s);
        }
        B(String s, String t)
        {
                this(t + s + "3");
        }
        B()
        {
                super("4");
        };
}
```

**Select the one correct answer.**

(a) It will just print Test.
(b) It will print Test followed by Test.
(c) It will print 123 followed by Test.
(d) It will print 12 followed by Test.
(e) It will print 4 followed by Test.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.15 Which statements about interfaces are true? Select the two correct answers.**

(a) Interfaces allow multiple implementation inheritance.
(b) Interfaces can be extended by any number of interfaces.
(c) Interfaces can extend any number of interfaces.
(d) Members of an interface are never static.
(e) Members of an interface can always be declared static.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.16 Which of these field declarations are legal within the body of an interface? Select the three correct answers.**

(a) public static int answer = 42;
(b) int answer;
(c) final static int answer = 42;
(d) public int answer = 42;
(e) private final static int answer = 42;

**Q.17 Which statements about the keywords extends and implements are true? Select the two correct answers.**

(a) The keyword extends is used to specify that an interface inherits from another interface.
(b) The keyword extends is used to specify that a class implements an interface.
(c) The keyword implements is used to specify that an interface inherits from another interface.
(d) The keyword implements is used to specify that a class inherits from an interface.
(e) The keyword implements is used to specify that a class inherits from another class.

**Q.18 Which statement is true about the following code?**

```
// Filename: MyClass.java
abstract class MyClass implements Interface1, Interface2
{
        public void f() { }
        public void g() { }
}
interface Interface1
{
        int VAL_A = 1;
        int VAL_B = 2;
        void f();
        void g();
}
interface Interface2
{
        int VAL_B = 3;
        int VAL_C = 4;
        void g();
        void h();
}
```

**Select the one correct answer.**

(a) MyClass only implements Interface1. Implementation for void h() from Interface2 is missing.

(b) The declarations of void g() in the two interfaces conflict, therefore, the code will not compile.
(c) The declarations of int VAL_B in the two interfaces conflict, therefore, the code will not compile.
(d) Nothing is wrong with the code, it will compile without errors.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.19 Which declaration can be inserted at (1) without causing a compilation error?**

```
interface MyConstants
{
        int r = 42; int s = 69;
        // (1) INSERT CODE HERE
}
```

**Select the two correct answers.**

(a) final double circumference = 2 * Math.PI * r;
(b) int total = total + r + s;
(c) int AREA = r * s;
(d) public static MAIN = 15;
(e) protected int CODE = 31337;

**Q.20 Which statement about the program is true?**

```
// Filename: MyClass.java
public class MyClass
{
        public static void main(String[] args)
        {
                A[] arrA;
                B[] arrB;
                arrA = new A[10];
                arrB = new B[20];

                arrA = arrB;                    // (1)
                arrB = (B[]) arrA;              // (2)
                arrA = new A[10];
                arrB = (B[]) arrA;              // (3)
        }
}
class A {} class B extends A
{}
```

**Select the one correct answer.**

(a) The program will fail to compile because of the assignment at (1).
(b) The program will throw a java.lang.ClassCastException in the assignment at (2), when run.
(c) The program will throw a java.lang.ClassCastException in the assignment at (3), when run.

(d) The program will compile and run without errors, even if the cast operator(B[]) in the statements at (2) and (3) is removed.
(e) The program will compile and run without errors, but will not do so if the cast operator (B[]) in statements at (2) and (3) is removed.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.21 What is the label of the first line that will cause compilation to fail in the following program?**

```
// Filename: MyClass.java
class MyClass
{
        public static void main(String[] args)
        {
                MyClass a;
                MySubclass b;
                a = new MyClass();              // (1)
                b = new MySubclass();           // (2)
                a = b;                          // (3)
                b = a;                          // (4)
                a = new MySubclass();           // (5)
                b = new MyClass();              // (6)
        }
}
class MySubclass extends MyClass {}
```

**Select the one correct answer.**

(a) (1)
(b) (2)
(c) (3)
(d) (4)
(e) (5)
(f) (6)

**Q.22 Given the following type and reference declarations, which assignment is legal?**

```
// Type declarations:
interface I1 {}
interface I2 {}
class C1 implements I1 {}
class C2 implements I2 {}
class C3 extends C1 implements I2 {}

// Reference declarations:
C1 obj1;   C2 obj2;   C3 obj3;
```

**Select the one correct answer.**

(a) obj2 = obj1;
(b) obj3 = obj1;
(c) obj3 = obj2;

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

(d) I1 a = obj2;
(e) I1 b = obj3;
(f) I2 c = obj1;

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.23 Given the following class and reference declarations, what can be said about the statement y = (Sub) x?**
**// Class declarations: class Super {} class Sub extends Super {}**
**// Reference declarations: Super x; Sub y;**
Select the one correct answer.
(a) Illegal at compile time.
(b) Legal at compile time, but might be illegal at runtime.
(c) Definitely legal at runtime, but the cast operator (Sub) is not strictly needed.
(d) Definitely legal at runtime, and the cast operator (Sub) is needed.

**Q.24 Given the following class declarations and declaration statements, which assignment is legal at compile time?**
**// Class declarations:**
**interface A {}**
**class B {}**
**class C extends B implements A {}**
**class D implements A {}**
**// Declaration statements:**
**B b = new B();**
**C c = new C();**
**D d = new D();**

**Select the one correct answer.**
(a) c = d;
(b) d = c;
(c) A a = d;
(d) d = (D) c;
(e) c = b;

**Q.25 Which letters will be printed when the following program is run?**

```
// Filename: MyClass.java
public class MyClass
{
    public static void main(String[] args)
    {
        B b = new C();
        A a = b;
        if (a instanceof A) System.out.println("A");
        if (a instanceof B) System.out.println("B");
        if (a instanceof C) System.out.println("C");
        if (a instanceof D) System.out.println("D");
```

```
        }
}
class A {}
class B extends A {}
class C extends B {}
```

**class D extends C {}**

**Select the three correct answers.**
(a) A will be printed.
(b) B will be printed.
(c) C will be printed.
(d) D will be printed.

**Q.26 Given three classes A, B, and C, where B is a subclass of A, and C is a subclass of B, which one of these boolean expressions is true only when an object denoted by reference o has actually been instantiated from class B, as opposed to from A or C?**
**Select the one correct answer.**
(a) (o instanceof B) && (!(o instanceof A))
(b) (o instanceof B) && (!(o instanceof C))
(c) !((o instanceof A) || (o instanceof B))
(d) (o instanceof B)
(e) (o instanceof B) && !((o instanceof A) || (o instanceof C))

**Q.27 When run, the following program will print all the letters I, J, C, and D. True or false?**

```
public class MyClass
{
        public static void main(String[] args)
        {
                I x = new D();
                if (x instanceof I) System.out.println("I");
                if (x instanceof J) System.out.println("J");
                if (x instanceof C) System.out.println("C");
                if (x instanceof D) System.out.println("D");
        }
}
interface I{}
interface J{}
class C implements I {}
class D extends C implements J {}
```

**Select the one correct answer.**
(a) True.
(b) False.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
public class RQ200_10
{
	public static void main(String[] args)
	{
		Integer iRef;
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
        iRef = 786;                          //(1)
        iRef = (Integer)(2007 - 786);        //(2)
        iRef = (int)3.14;                    //(3)
        iRef = (Integer)3.14;                //(4)
        iRef = (Integer)(int)3.14;           //(5)
    }
}
```

**Select the one correct answer.**
(a) The code will fail to compile because of errors in at least one of the lines (1),(2), and (3).
(b) The code will fail to compile because of errors in both the lines (4) and (5).
(c) The code will fail to compile because of error in line (4).
(d) The code will fail to compile because of error in line (5).
(e) The code will compile, but throw a ClassCastException.
(f) The code will compile and execute normally.

**Q.29 What will the program print when compiled and run?**

```
public class RQ200_60
{
    public static void main(String[] args)
    {
        Integer i = -10; Integer j = -10;
        System.out.print(i==j);
        System.out.print(i.equals(j));

        Integer n = 128; Integer m =
        128; System.out.print(n==m);
        System.out.print(n.equals(m));
    }
}
```

**Select the one correct answer.**
(a) falsetruefalsetrue
(b) truetruetruetrue
(c) falsetruetruetrue
(d) truetruefalsetrue
(e) None of the above.

**Q.30 What will the program print when compiled and run?**

```
public class RQ200_70
{
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
public static void main(String[] args)
{
        Integer i = new Integer(-10);
```

```
            Integer j = new Integer(-10);
            Integer k = -10;
            System.out.print(i==j);
            System.out.print(i.equals(j));
            System.out.print(i==k);
            System.out.print(i.equals(k));
        }
}
```

**Select the one correct answer.**

(a) falsetruefalsetrue
(b) truetruetruetrue
(c) falsetruetruetrue
(d) truetruefalsetrue
(e) None of the above.

**Q.31 Given:**

```
public class RQ200_20
{
        private Map<String, Integer> accounts = new HashMap<String, Integer>();
        public int getBalance(String accountName)
        {
            Integer total = (Integer) accounts.get(accountName);          // (1) if
            (total == null) total = new Integer(0);                        // (2)
            return total.intValue();                                       // (3)
        }
        public void setBalance(String accountName, int amount)
        {
            accounts.put(accountName, new Integer(amount));        // (4)
        }
}
```

**Which statements can be replaced so that the program still compiles and runs without errors? Select the three correct answers.**

(a) Replace (1)–(3) with:
int total = accounts.get(accountName);
if (total == null) total = 0; return total;

(b) Replace (1)–(3) with:
int total = accounts.get(accountName);
return total == null ? 0 : total;

(c) Replace (1)–(3) with:
return accounts.get(accountName);

(d) Replace (4) with:
accounts.put(accountName, amount);

(e) Replace (4) with:
accounts.put(accountName, amount.intValue());

**Q.32 What is the result of compiling and running the following program?**

```
class YingYang
{
	void yingyang(Integer i)
	{
		System.out.println("Integer: " + i);
	}
	void yingyang(Integer[] ints)
	{
		System.out.println("Integer[]: " + ints[0]);
	}
	void yingyang(Integer... ints)
	{
		System.out.println("Integer...: " + ints[0]);
	}
}
public class RQ800_50
{
	public static void main(String[] args)
	{
		YingYang yy = new YingYang();
		yy.yingyang(10);
		yy.yingyang(10,12);
		yy.yingyang(new Integer[] {10, 20});
		yy.yingyang(new Integer(10), new Integer(20));
	}
}
```

**Select the one correct answer.**

(a) The class YingYang does not compile because of errors.
(b) The program compiles and prints:
	Integer: 10
	Integer...: 10
	Integer...: 10
	Integer...: 10
(c) The program compiles and prints:
	Integer: 10
	Integer...: 10
	Integer[]: 10

**Java Programming**
**Practice Set - 2**

**Q.33 What is the result of compiling and running the following program?**

```
public class RQ800_60
{
	static void printFirst(Integer... ints)
	{
		System.out.println("Integer...: " + ints[0]);
	}
	static void printFirst(Number... nums)
	{
		System.out.println("Number...: " + nums[0]);
	}
	static void printFirst(Object... objs)
	{
		System.out.println("Object...: " + objs[0]);
	}
	public static void main(String[] args)
	{
		printFirst(10);
		printFirst((byte)20);
		printFirst('3', '0');
		printFirst("40");
		printFirst((short)50, 55);
		printFirst((Number[])new Integer[] {70, 75});
	}
}
```

**Select the one correct answer.**

(a) The program does not compile because of ambiguous method calls.

(b) The program compiles and prints:

Integer...: 10
Integer...: 20
Integer...: 3
Object...: 40
Integer...: 50
Number...: 70

(c) The program compiles and prints:

Integer...: 10
Number...: 20
Object...: 3
Object...: 40
Number...: 50
Number...: 70

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

(d) The program compiles and prints:

```
Integer...: 10
Integer...: 20
Integer...: 3
Object...: 40
```

Number...: 50
Number...: 70

**Q.34 What is the result of compiling and running the following program?**

```
public class RQ800_80
{
        static String compute(long... ls)    { return "ONE"; }
        static String compute(Long... ls)    { return "TWO"; }
        static String compute(Integer i1, Integer i2) { return "THREE"; }
        static String compute(Long l1, Long l2)    { return "FOUR"; }
        static String compute(Number n1, Number n2)   { return "FIVE"; }
        public static void main(String[] args)
        {
                System.out.println(compute((byte)5,  (byte)10)  +  ",  "  +  compute(5,  10));
                System.out.println(compute(5L, 10) + ", " + compute(5L, 10L));
        }
}
```

**Select the one correct answer.**

(a) The program does not compile because of errors.
(b) The program compiles and prints:
THREE, THREE FOUR, FOUR
(c) The program compiles and prints:
FIVE, THREE FIVE, FOUR
(d) The program compiles and prints:
FIVE, THREE ONE, TWO
(e) The program compiles and prints:
ONE, THREE ONE, ONE

**Q.35 What will be the result of compiling and running the following program?**

```
public class Polymorphism
{
        public static void main(String[] args)
        {
                A ref1 = new C(); B ref2 = (B)
                ref1;
                System.out.println(ref2.f());
        }
}
class A
{
        int f() { return 0; }
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
class B extends A
{
        int f() { return 1; }
}
```

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
class C extends B
{
        int f() { return 2; }
}
```

**Select the one correct answer.**

(a) The program will fail to compile.
(b) The program will compile but will throw a ClassCastException, when run.
(c) The program will compile and print 0, when run.
(d) The program will compile and print 1, when run.
(e) The program will compile and print 2, when run.

**Q.36 What will be the result of compiling and running the following program?**

```
public class Polymorphism2
{
        public static void main(String[] args)
        {
                A ref1 = new C(); B ref2 = (B)
                ref1;
                System.out.println(ref2.g());
        }
}
class A
{
        private int f() { return 0; }
        public int g() { return 3; }
}
class B extends A
{
        private int f() { return 1; }
        public int g() { return f(); }
}
class C extends B
{
        public int f() { return 2; }
}
```

**Select the one correct answer.**

(a) The program will fail to compile.
(b) The program will compile and print 0, when run.
(c) The program will compile and print 1, when run.
(d) The program will compile and print 2, when run.
(e) The program will compile and print 3, when run.

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

**Q.37 Which statements about the program are true?**
**public interface HeavenlyBody{ String describe(); }**

**School of Computer Science and Engineering**
**MCQ for Programming Ability and Logic Building – 1**
**Java Programming**
**Practice Set - 2**

```
class Star
{
        String starName;
        public String describe() { return "star " + starName; }
}
class Planet extends Star
{
        String name;
        public String describe()
        {
                return "planet " + name + " orbiting star " + starName;
        }
}
```

**Select the two correct answers:**

(a) The code will fail to compile.

(b) The code defines a Planet *is-a* Star relationship.

(c) The code will fail to compile if the name starName is replaced with the name bodyName throughout the declaration of the Star class.

(d) The code will fail to compile if the name starName is replaced with the name name throughout the declaration of the Star class.

(e) An instance of Planet is a valid instance of HeavenlyBody.

**Q.38 Given the following code, which statement is true?**

```
public interface HeavenlyBody { String describe(); }
class Star implements HeavenlyBody
{
        String starName;
        public String describe() { return "star " + starName; }
}
class Planet
{
        String name;
        Star orbiting;
        public String describe()
        {
                return "planet " + name + " orbiting " + orbiting.describe();
        }
}
```

**Select the one correct answer:**

(a) The code will fail to compile.

(b) The code defines a Planet *has-a* Star relationship.

(c) The code will fail to compile if the name starName is replaced with the name bodyName throughout the declaration of the Star class.
(d) The code will fail to compile if the name starName is replaced with the name name throughout the declaration of the Star class.

(e) An instance of Planet is a valid instance of a HeavenlyBody.

**Q.39 Which statement is not true? Select the one correct answer.**
(a) Maximizing cohesion and minimizing coupling are the hallmarks of a well designed application.
(b) Coupling is an inherent property of any non-trivial OO design.
(c) Adhering to the JavaBeans naming standard can aid in achieving encapsulation.
(d) Dependencies between classes can be minimized by hiding implementation details.
(e) Each method implementing a single task will result in a class that has high cohesion.
(f) None of the above.
